

OYEN 2 SOLAR PROJECT NEWSLETTER #1 – MAY 2024

Universal Kraft Canada Renewables is developing the Oyen 2 Solar Project in your area. We are committed to engaging landowners, public stakeholders and members of the local community and we look forward to discussing the Project with you.

ABOUT THE DEVELOPER

Universal Kraft Canada Renewables is a Joint Venture between **Korkia** and **Universal Kraft** to develop utility scale solar. The companies bring together global experience with a speciality in developing solar in cold climates.

Universal Kraft is a global renewable energy developer specialised in solar, wind, small-scale hydro, waste-to-energy and energy storage solutions. Universal Kraft's mission is to promote sustainable business with a direct and positive impact on society.

Korkia is an accelerator of the energy transition, with a global portfolio of +18GW of utility scale solar, onshore wind and BESS. Its' focus is on the development phase of renewable energy projects. It is responsible for funding the development of all projects in the partnership.

ABOUT THE PROJECT

The Oyen 2 Project (the Project) is being developed by Universal Kraft Canada Renewables (the Proponent). The Project began development in second half of 2022 and includes approximately 959 acres of land located approximately 14.5 km north west of the Town of Oyen, Alberta, in Special Area No. 3, (as shown on the enclosed map). The Project is wholly located on privately owned, cultivated land. The Project area has a strong solar resource, characteristic of Alberta, and will generate clean energy over its 30+ year lifetime.

The Project will consist of 162 megawatts ac (MWac) of solar capacity. Based on the preliminary design, the Project includes approximately 360,000 solar photovoltaic modules installed on a single-axis tracking system, 40 central inverters, an electrical collection system, internal access roads and the construction of a Project substation to connect to the Alberta Interconnected Electric System (AIES).

IN THIS NEWSLETTER:

- About Universal Kraft
- About the Project
- Project Location
- Project Benefits
- Project Infrastructure
- Project Studies
- Who is the AUC?
- Preliminary Project Schedule
- Next Steps
- Contact Us

INSERTS:

- Preliminary Project Layout
- Glare Map
- AUC Brochure

PRIVACY STATEMENT

Collected personal information will be protected under the provincial *Personal Information Protection Act*. As part of the regulatory process for new generation projects and transmission lines, the Proponent may be required to provide your personal information to the Alberta Utilities Commission (AUC).

OYEN 2 SOLAR PROJECT

PROJECT LOCATION

The proposed Project is located approximately 14.5 km north west of the Town of Oyen, as shown below.

PROJECT BENEFITS

Universal Kraft Canada Renewables is committed to making a positive social impact for the communities in which we work. We strive to be a good neighbour, and work closely with the community to identify areas of opportunity and concern. Our community engagement will continue throughout the Project phases, including construction and operation.

The Project will have many community benefits, including the following:

- **Local Employment:** The Project will create **120 construction jobs** direct, and approximately **20 full time jobs** indirectly during construction, creating opportunities for local individuals and businesses. During operations, the Project will provide 2 permanent full-time jobs.
- **Local Economic Boost:** Local businesses will experience increased activity due to the spin-off opportunities created by the Project during development, construction, and operations.
- **Property Taxes:** The Project will pay **2.5 Million annual** in property taxes to the County, resulting in financial benefits to the community.
- **Clean Energy Generation:** The Project will generate emissions-free electricity for approximately 110, 000 homes.

OYEN 2 SOLAR PROJECT

PROJECT INFRASTRUCTURE

SOLAR PV MODULES

Bifacial PV modules have been proposed for installation at the Project. A bifacial module is a double-sided module that transforms sunlight into electrical energy on both its top and bottom sides. They are different from mono-facial modules which only use one side for solar energy production. Bifacial modules are capable of producing more power per module and typically have higher efficiency than mono-facial modules, resulting in less land usage for the same or greater power output. Local weather conditions in Alberta are well suited to bifacial technology as there is substantial snow cover on the ground, which will boost production during the winter months. One of the benefits of using bifacial modules in Alberta is that sunlight is reflected from the surface of snow-covered land, which can generate electricity from the underside of the panel.

GROUND MOUNTING SYSTEMS

The Proponent intends to install the PV modules on single-axis tracker systems which follow the path of the sun to produce additional electricity.

INVERTER/TRANSFORMER STATIONS

Inverters are electrical devices that change direct current (dc) to alternating current (ac). Transformers are electrical equipment that increase or decrease the voltage of electricity. The Project will use inverter/transformer stations to change the dc electricity from the solar PV modules to ac electricity and increase the voltage.

INTERCONNECTION

Project interconnection will be undertaken by AESO and ATCO as a separate project and regulatory submission, in cooperation with the proponent. As such, this document does not include details regarding this project component. The proposed powerline will connect the Oyen 2 Solar Project to the 240 kV 9L46 transmission line through a In/Out connection.

OTHER INFRASTRUCTURE

The inverter/transformer stations in the Project will be connected through 34.5 kV underground collector lines that connect to the Project substation. The Project substation will contain one high voltage transformer. To transport materials during the construction stage and to access the Project equipment for regular maintenance during operations, the Project will require the construction of new access paths, and where possible, the upgrade of existing roads in the area to minimize disturbance.

OYEN 2 SOLAR PROJECT

PROJECT STUDIES

Environment:

The Proponent initiated field studies in Q3 2022 and completed the remaining field studies in 2024 , which includes the following:

- Wildlife surveys, including breeding bird, spring and fall bird migration, raptor, burrowing owl and sharp-tailed grouse
- Vegetation studies
- Desktop wetland delineation and field verification
- Habitat mapping
- Flood assessment
- Topographic survey

The results of these field studies were compiled and analyzed in a third-party report. The report was provided to Alberta Environment and Protected Areas (AEPA) for review in April 2024. AEPA will issue a Renewable Energy Wildlife Referral Report following their review (anticipated in Q4 2024). The Proponent is committed to consulting with AEPA to understand any potential concerns it may have, and will incorporate AEPA's feedback. The Proponent will continue to work with AEPA throughout the development, construction, and operations of the Project, and ensure that environmental surveys are kept up to date per AEPA guidelines.

Historical resources:

The Project has submitted a Historical Resources Act application and received *Historical Resources Act* approval in March 2024 from Alberta Culture.

Noise:

A noise impact assessment (NIA) for the proposed layout as per AUC Rule 012, has been conducted and concluded (February 2024) . This detailed NIA has confirmed that the Project is noise compliant for all evaluated residences within 1.5km of the Project. A copy of the NIA will also be included in the application for the AUC.

Glare: A glare assessment has been completed (March, 2024) for the Project to assess potential for glare at aerodromes, nearby residences and along local roads. Five nearby routes were assessed in this analysis: Range Road 50 (RR1), east of the Project; Range Road 53 (RR2), Range Road 54 (RR3), west of the Project, Township Road 294 (RR5), north of the Project; and Township Road 290 (RR4), south of the Project. . A glare impact map outlining the assessment results is included in this package and a copy of the Solar Glare Hazard Assessment Report will be included in the application to the AUC. If future issues are identified there is possibility to mitigate.

WHO IS THE AUC?

The Alberta Utilities Commission (AUC) is a quasi-judicial independent agency established by the Government of Alberta, responsible to ensure that the delivery of Alberta's utility service takes place in a manner that is fair, responsible and in the public interest.

They regulate investor-owned natural gas, electric and water utilities, and certain municipally owned electric utilities to ensure that customers receive safe and reliable service at just and reasonable rates. The AUC ensures that electric facilities are built, operated and decommissioned in an efficient and environmentally responsible way. The AUC also provides regulatory oversight of issues related to the development and operation of the wholesale electricity market in Alberta as well as the retail gas and electricity markets in the province. For more information visit www.auc.ab.ca or refer to the enclosed brochure.

OYEN 2 SOLAR PROJECT

PRELIMINARY PROJECT SCHEDULE

Notification to stakeholders – May 2024
Public Consultation – Ongoing
AEPA Submission - April 2024
Open House – 04 June 2024
Anticipated AEPA Referral Report – October 2024
Anticipated AUC Submission – November 2024
Anticipated AUC Approval – April 2025
Municipal Permitting - March 2024 to September 2024
Construction Commencement (if approved) – Q3, 2025
Construction Completion – Q1 2027

To learn more about the AUC application and review process, please contact:

Alberta Utilities Commission (AUC)

Phone: (780) 427-4903

Toll-Free by dialing 310-000 before the number

NEXT STEPS

Universal Kraft Canada Renewables is committed to meaningful engagement with all stakeholders in the Project. Following this newsletter, we will be contacting nearby landowners, occupants and residents to gather feedback and hosting a community open house, expected in June 2024. We intend to file a solar power plant and substation application with the AUC in November 2024. We are committed to sharing information about the Project and working with the public to ensure that we hear and address stakeholder input and concerns. We encourage stakeholders to participate throughout this process and to contact us if you have any questions or concerns about the Project. We will incorporate a summary of stakeholder comments into the application that we submit to the AUC. We have included an AUC brochure titled "Participating in the AUC's independent review process" with this newsletter.

CONTACT US

If you have any questions about the Project, or to arrange a personal consultation, please contact:
